PROJECTS

Location Tracking using Face Recognition	Weather Application	Burger Builder App
This is a people tracking project based on face recognition. There will be different cameras in different parts of building. On main entrance, we will take some pictures of people, assign them some id, save record in database. After entering, if the person moves to any of these areas, the camera of that particular area recognizes the face, matches with the faces in database and updates the location of person. It is connected to web using python flask framework.	This is a front end project made in React js where user can enter any city he wants to see the weather of. Openweather api.	A front end project made in react js. Different ingredients are available and user can add them to his burger. According to the ingredients. Cost of burger will be updated.

EDUCATION

PAF KIET | Karachi, Pakistan   **BSCS |** August 2018 – August 2022

Key courses: Object Oriented Programming, Database Management, Operating Systems, Artificial Intelligence and Numerical Computing.

Adamjee Government Science College | Karachi, Pakistan   **HSC |** September 2015 - September 2017 Intermediate

in pre-engineering.
